

About safety cameras

Safety cameras save lives.

An Garda Síochána has contracted a company called GoSafe to operate safety cameras in Ireland on behalf of the organisation.

As well as 6,000 enforcement hours, the cameras will survey and count the number and speed of vehicles on the road. Ongoing surveys will allow An Garda Síochána to build up a picture of where speeding is happening.

The safety cameras will operate during the day and at night-time, seven days a week. On a phased basis, 6,000 enforcement hours will be provided at geographically dispersed locations on a monthly basis.

The safety cameras will be operated by trained GoSafe personnel. GoSafe will be paid based on the number of hours completed – there is no financial incentive associated with increased detection rates.

The Garda National Traffic Bureau (GNTB) will determine the locations and times of on-road operations of the safety camera operations.

There are 1031 speed enforcement zones around the country where safety cameras operate, effective from 27th May 2016.

An Garda Síochána will use safety cameras, in conjunction with all the other technology and resources available to us, to reduce the number of speed related collisions by:

- Increasing compliance with speed limits across the entire road network to **save lives**
- Reducing the speed of vehicles at locations that have a speed related collision history
- Acting as a deterrent to driving at excessive speeds

Slow down. Save a life. It could be yours
